

# Grontmij Biogas

**Biogas** is a prioritized area for Grontmij and regardless if you need the most innovative solution, or simply the best, we can bring your project across the finish line.

**The market** demands totality and we can provide support in all steps of the value chain, from raw material to management of the produced products. Our starting-point is always to work from what creates value for the client.

## Totality—from start to finish

Grontmij stands for continuity and quality throughout the whole process, regardless if it is a question of a small project within a larger whole, a through impact assessment or complete responsibility from start to finish.

### New construction

Reliable documents that facilitate sound decision making are decisive when long term investments are planned. This necessitates knowledge about the considerations that need to be taken to clients, administrative boards, creators of public opinion and the surrounding world in general. Our experts constantly update themselves with regard to changes in legislation and environmental praxis and can analyze and match the demands to the planned investments.

### From feasibility study to procurement

Feasibility studies and pre-planning are an important part of the repertoire that we offer. Maintaining high quality from the beginning minimizes the risk of being faced requirements

to complement documentation with additional information, which could potentially result in expensive delays. This high level of quality is also adopted for projecting and planning, procurement documentation and inquiry.

### Competent project responsibility

From experience we know that the competence and experience possessed by our project managers is appreciated by our clients. Our project managers coordinate technique and participants' contribution to the project, from start to finish.

### Follow-up and evaluation

Follow-up/evaluation, like inspections and documentation, are important parts in development. Our long-standing experience from realization of large and small projects, provide us with the tools to critically analyze changes that have been carried out and contribute to continuous improvements.

## From idea to operational plant

Grontmij can provide support in all steps of the chain, from feasibility studies to management of the produced products. We also offer judicial, environment and business support to maximize the benefits of your investment.

Grontmij operates and optimizes existing plants and we are active within research and development.
